Shown closed

Quick-Thread **ORGANIZER**

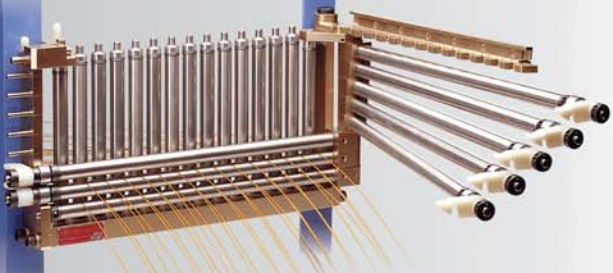

For use in steel cord creel service at the forward end of the creel or at the creel room exit.

Combines the ease of threading grooved rollers with the positive cord containment of eyelets. The rollers provide a rolling surface to contain and guide the cords. Rollers are stainless steel or optionally hardened steel.

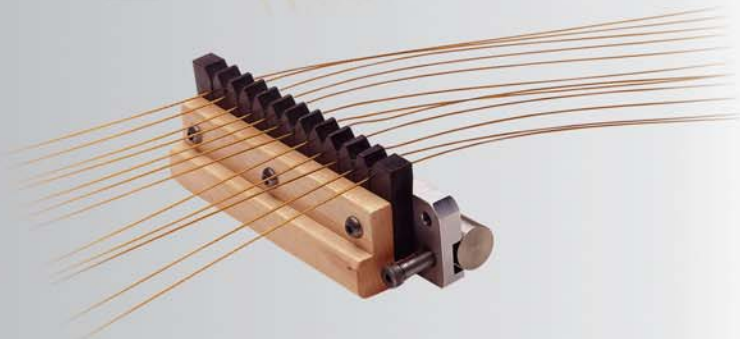

Open for loading

Quick-Thread opens easily and quickly. Its horizontal rollers swing away to reveal cantilevered vertical rollers ready to receive cords dropped in the open spaces between the rollers, resting on the first roller level.

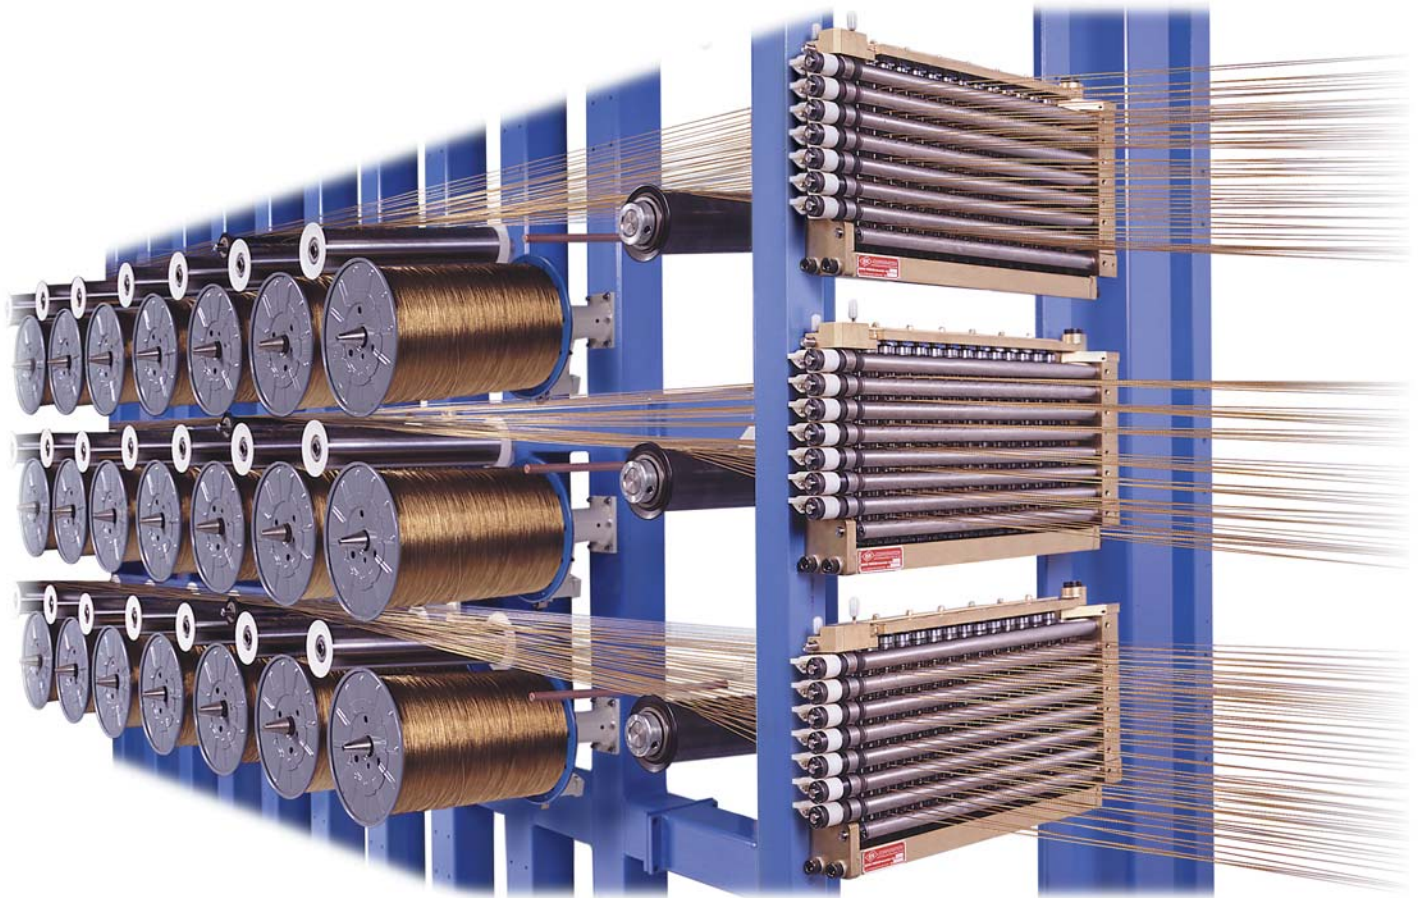

After the first layer is filled, the lowest swing roller is closed and effortlessly snapped in place. The process is repeated until the complete organizer is filled. When fully closed, the organizer rollers are supported at both ends for running.

To assist in creel threading, a hard-held wire grip may be used to retain and deliver the steel cords to the *Quick-Thread* organizer. The spacing of the grip corresponds to the roller spacing of the organizer allowing easy transfer of cords from the grip.
